History of Science & Medicine in Islam

- 130 titles in a total of 151 volumes. 36% in Arabic, 28% in German, 27% in English, and other languages.
- Focus on transmission, editing, and study of Greek and Arabic knowledge of medicine, astronomy, mathematics and philosophy.
- Books are in very good condition.
- Complete list of all titles available.
- The collection is being sold in its entirety.

HISTORY OF MEDICINE is the largest subject. Examples are three Göttingen Academy volumes on the Arabic Dioscorides tradition, each with the Arabic text and an annotated German translation: the anonymous Dioscorides triumphans, Ibn al-Bayṭār's Dioskurides-Erklärung and Die Ergänzung Ibn Gulḡul's. Ibn al-Jazzār's Zād al-musāfir is present in three critical editions: Book 6, Book 7, chapters 1 to 6, and Books III to V. Two Cairo editions are based on the only two known manuscripts: al-Ġāfiqī's Muntaḥab, fascicles II to IV (1937 to 1940), and the treatise on the eye ascribed to Ḥunayn (1928). Dols, The Black Death in the Middle East, Ullmann, Islamic medicine, and Weisser's study of conception, heredity and prenatal development are also included.

MATHEMATICS AND ASTRONOMY are the second prominent theme. Al-Bīrūnī's Istiḥrāğ al-awṭār deals with the chords of the circle; al-Karağī's Kitāb al-Badī' fī l-ḥisāb is edited from a Vatican manuscript with a French introduction. Works on astronomy include Nallino's 'Ilm al-falak, the history of Arabic astronomy in the Middle Ages (Rome 1911), Strohmaier's Die Sterne des Abd ar-Rahman as-Sufi on the Book of Fixed Stars, with colour illustrations from the Gotha manuscript, and the Persian Risāla-i dar itbāt-i hay'at-i ḡadīd on the new astronomy.

PHILOSOPHY is centred on the Arabic reception of Aristotle. Averroes is the largest group with eleven entries, among them Bouyges's edition of the Long Commentary on the Metaphysics in three volumes with the Notice, the *Talḥīṣ kitāb al-Maqūlāt* (Beirut 1932) and the Epitome in Physicorum libros. Avicenna is represented by the Šifā' volume on physics and Bertolacci's study of its Metaphysics. Al-Kindī's Kitāb al-Kindī ilā l-Mu'tašim bi-llāh fī l-falsafa al-ūlā (Cairo 1948), Hans Daiber's Aetius Arabus and Vagelpohl on Aristotle's Rhetoric complete the picture.
